

The main domain of professional activity includes surveillance of communicable disease (cholera and diarrhoeal diseases, zoonosis and vector borne diseases) and outbreak response. I'm responsible for coordination of national surveillance system on communicable diseases and public health event. We have to organize public health intervention according national procedures in case of outbreak (shigellosis, salmonellosis,) or in a single case (anthrax, tularemia etc). I represent the Focal Point for IHR implementation in the Republic of Moldova. After announcement of influenza pandemic alert phase I participated to enhance the national surveillance system capacities of pandemic influenza and as well prepared the notifications to WHO about trends of diseases cases and death.

According to the Governmental Decree competent authorities at points of entry are Border Police and Customs Services, using the WHO Assessment tool for core capacity requirements at designated airports, ports and ground crossings we evaluated in 2010 national capacity at points of entry and started to implement requirements in order to strengthen the capacity to detect, notify, and control of public health events. In 2009 ministries of Health and Agriculture established a protocol for information exchanging regarding zoonotic diseases. I continue to work on scientific researches in the field of communicable vector-borne diseases.
